

# Knee Airbag

## Knee Airbags for Driver or Passenger Application

### Characteristics:

#### Performance

- optimizes crash occupant kinematics and significantly reduces chest deflection
- stops occupant submarining effect
- knee mapping avoids EuroNCAP modifiers
- full compliance to EuroNCAP requirements
- full compliance to USNCAP requirements
- bag volumes between 14 and 22 liter

#### Main Features

- invisible installation with low mounting module
- high and mid mounted modules with visible hard cover
- floating cover for perfect gap and step conditions
- OoP friendly airbag deployment
- common module design for left and right hand drive application
- common module design for driver and passenger application
- customization to most vehicle package space conditions
- KSS cold gas inflator
